

# Prolinx Nearline Storage Services

## Maximize the return on your data storage investment

### Overview

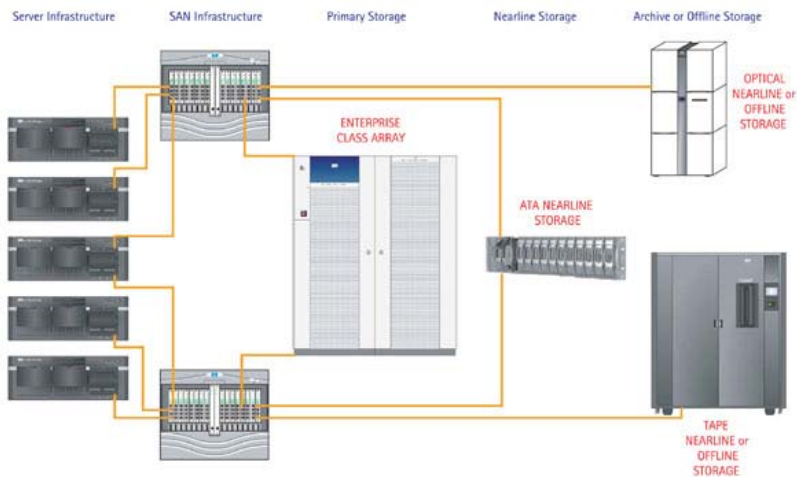

In the majority of IT environments, less than 30% of the data residing on a company's storage infrastructure is accessed on a regular basis. This is usually database or transactional information. The remaining 70% could be a waste of valuable resources. Most of this data is more than likely to be valuable reference material (word documents, pdfs, spreadsheets etc). In most cases this resource is a high end SAN attached storage array of some kind. Instead of using space on this expensive high performance array, a more cost effective solution would be to migrate this static data to some kind of nearline storage system. Nearline storage is a cost-effective means to manage data.

### Target Audience

Companies working to maximise return on their data storage investments, utilise assets more cost effectively and improve system performance.

### Benefits

- A more cost effective option for businesses with high volumes of essential information
- Remove stale data from your enterprise class storage systems
- Put more of your frequently accessed fixed content (images, video, documents, emails) online for faster access - and do it cost-effectively
- Replicate your business critical information without having to double or triple your current disk expenditures
- Improve backup and recovery performance while reducing costs
- Take advantage of the benefits ATA disk based storage systems deliver, without having to modify existing software applications or compromise on performance, reliability, availability and serviceability.

### Requirements

- Conference room with projector and networked clients running MS Windows 2000 or higher

### Scope and Pricing

- For more information and pricing contact your Prolinx Account Manager or call 01844 279199.
