Prolinx and Dell:

Providing better training for your troops

Training is a pivotal part of military life. And at Prolinx, we believe that there are few lessons more important than teaching our troops how to defend our country.

That's why we've partnered with Dell and other specialists to deliver the tools you need to provide the most effective training programmes for your staff – programmes that are fit for the future, that offer outstanding value for money, and that engage in a meaningful way.

The training

Although training simulation has been used in the defence sector for many years, we know that many of the solutions in use today are outdated and redundant.

We've revolutionised simulation, and are allowing our forces to take advantage of virtual-reality technologies – either through a virtualised desktop environment, or in a secure, fully managed and hosted facility.

Prolinx has combined the various technologies from our partners and is now able to deliver high end graphics remotely to various sites. This means that both the regular soldier and the reservist forces can be trained remotely wherever they are located and with whatever programmes are chosen.

Our method is bringing powerful, high-quality resources to troops like yours. It's future-proof, it's personalised, and it's reliable. We call it Simulation & Training as a Remote Service (STaaRS).
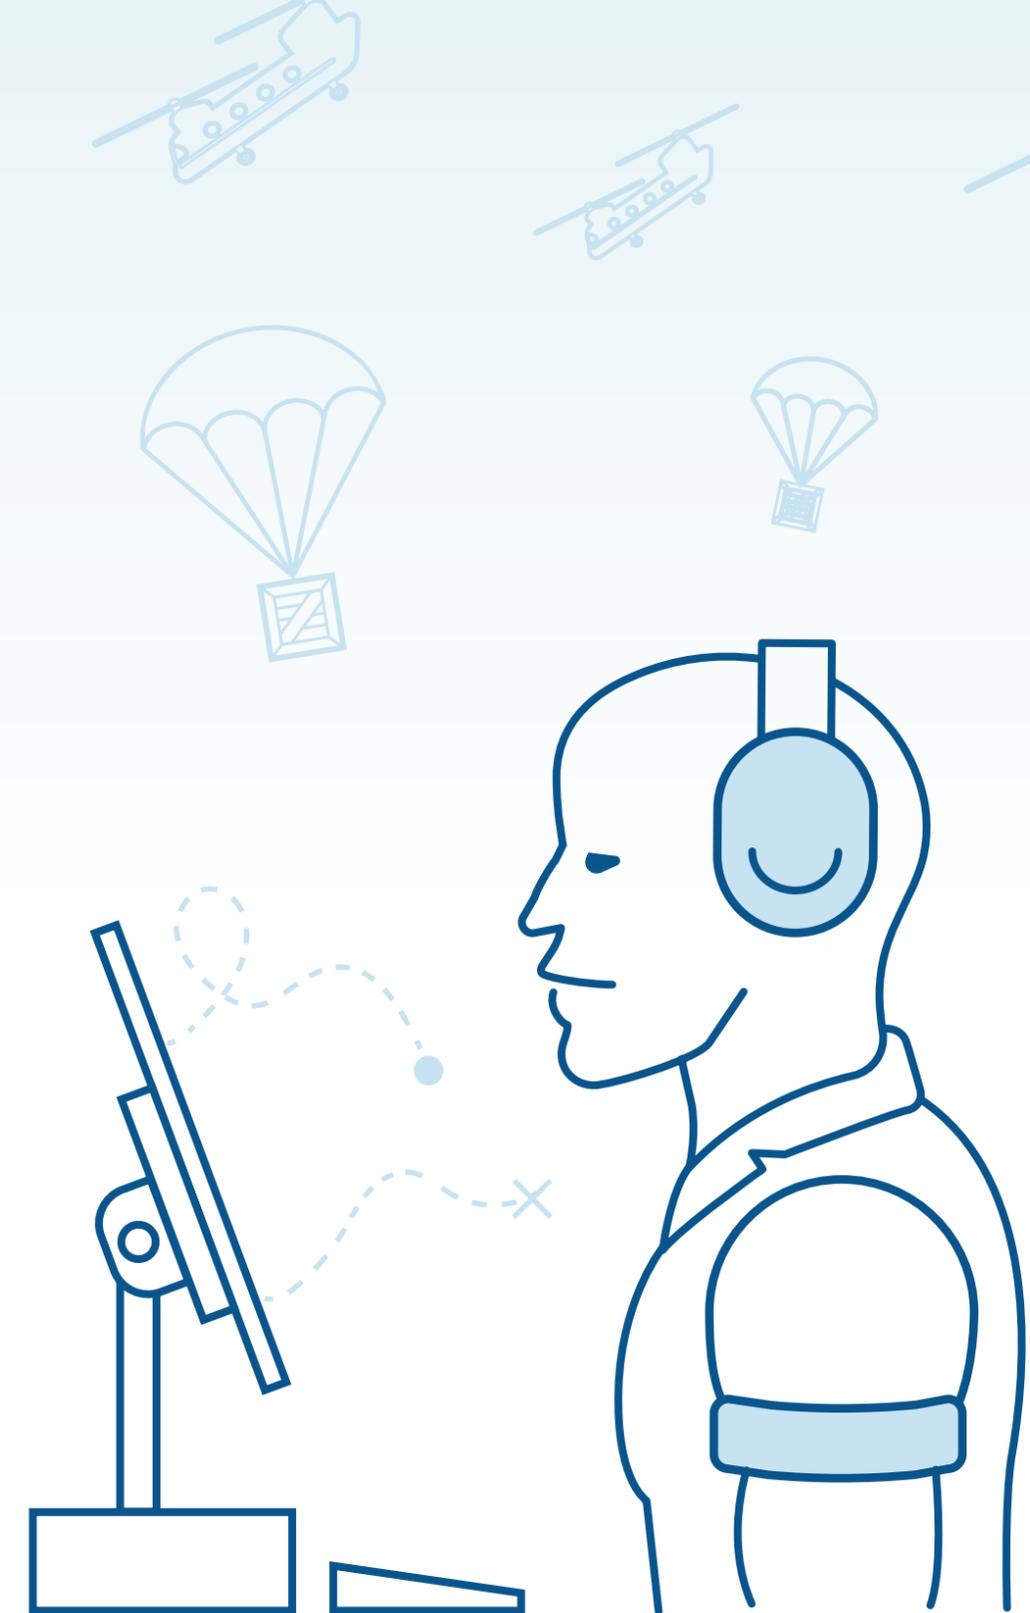

"Our defence customers will gain significant cost savings from virtualisation. They will no longer face the frequent expense of maintenance and refresh cycles."

- Simon Blackburn, Sales Director, Prolinx

The take-home

STaaRS can bring boundless benefits to your sector, including:

- **Cost savings**

  Not only can we eliminate the need for all your troops to assemble in the same place for sessions, but also this may be the last training tool you'll ever have to purchase. Thanks to our responsive platform, you can change and update programmes as and when you need… giving ultimate return on investment.

- **Compliance**

  Our solution meets all government security classifications, for complete peace of mind.

- **Cutting-edge programmes**

  We'll empower you to boost the speed and success rate of your training for all your soldiers and stakeholders with content that innovates and resonates.

PROLINX

DELL | intel

The technology

A modern solution requires modern support. STaaRS is built on the latest and best technology from Dell, for robust, secure and uncompromising performance.

This includes:

- Dell PowerEdge M630 blade servers with Intel Xeon processors

- Dell PowerEdge rack servers

- Dell Precision workstations

- EMC storage

- High-definition graphics cards

Choose STaaRS and we'll work together to select the relevant components for your needs.
